Stay Organized. Stay Focused.

A simple and intuitive task manager built with React to help you plan your day, track progress, and get things done efficiently.

Get Started   Go to Tasks ↗

How it works?

➕ Add your tasks in the Tasks page

☑ Mark tasks as completed once done

⚑ Keep track of your progress easily

About this project

This is a beginner-friendly Todo application built using React.js and Vite, styled with Tailwind CSS.
The project features a clean and responsive user interface with separate pages for introduction and task management.
Users can add, complete, and delete tasks, with smooth navigation handled using React Router.
The app follows a component-based architecture and leverages React Hooks for efficient state management.
